Jason woke up early in the morning. He had (1) and was shivering. He got out of his bed and went to the kitchen to get a thermometer to take his (2). It was rather high. He felt sort of (3) and weak. He could hardly walk, so he returned to his bed. Suddenly, he realised that his (4) was unusually high. He woke up his wife, Jennifer, and asked her to take his (5). She was alarmed. She told him that he was flushed and that the (6) might indicate flu (7). They decided that he should make a(n) (8) to see a specialist. Immediately, Jason phoned the (9) and arranged a visit.

Jason arrived at the doctor's (10) at eleven a.m. and sat on a chair in the (11). There were three other people expecting their turn. Half an hour later, the (12) called Jason's number and asked him to come in. The doctor asked Jason what was wrong. Jason told him about his (13) and the symptoms. He added that he also had dry (14), muscle and joint (15) as well as a (16) nose.

After the (17), the doctor was pretty sure that Jason suffered a(n) (18) of flu. But he told Jason not to worry as the disease was not (19) and that (20) of flu and common (21) were quite frequent in winter time. The doctor made out a(n) (22) and advised Jason to stay in bed for at least five days as the full (23) might take a while. He told Jason to drink a lot of water. He also recommended that Jason should get a(n) (24) against flu viruses for the sake of his (25) in the future.
