## **Business Dialogues:**

# Al<sup>1</sup> Integration

Fusion, a mid-sized² marketing company that specialises in permission marketing³ in the digital space, is discussing the integration of AI into their business processes. **Chris** (CEO⁴/Content Lead⁵), **Sam** (Legal Compliance Officer⁵), and **Alex** (IT⁻) are discussing how to retain³ creative autonomy and ensure³ adherence¹o to UK law¹¹ while developing AI that aligns with¹² the company's unique style and values.

#### Chris

(leaning<sup>13</sup> forward<sup>14</sup>)

Right guys, so we're here to discuss how using AI can enhance our unique approach to¹⁵ permission marketing while staying true to our values. Fusion's all about creating genuine¹⁶, engaging¹² content for our clients. Can we turbo-charge¹⁶ that with AI?

#### Alex (nodding19)

We've been thinking a lot about this and have been experimenting with developing our own in-house<sup>20</sup> AI tools. We've developed one or two test applications that we're excited about. One would be a content ideation tool<sup>21</sup> that helps generate new and creative ideas using machine learning algorithms to analyse data on previous<sup>22</sup> campaigns and understand better what worked. The idea is to help our guys stay fresh, and not repeat themselves. We've also been working on a copywriting tool that generates drafts<sup>23</sup> based on specific keywords and target<sup>24</sup> audiences<sup>25</sup>.

#### Chris

Sounds<sup>26</sup> promising, **Alex**, certainly<sup>27</sup> from an efficiency of work point of view<sup>28</sup>. But can our dev team<sup>29</sup> really handle<sup>30</sup> this in-house? Do we have the chops<sup>31</sup>?

### Alex

Well, we've certainly got the talent, and the API<sup>32</sup> is very intuitive to work with. But we'll certainly need to

allocate<sup>33</sup> additional resources<sup>34</sup>. Probably a dedicated project team. If needed, we can always bring in<sup>35</sup> external<sup>36</sup> partners to support us. A number of our existing relationships have already signalled that they've begun development on AI apps for marketing functions already.

#### Chris

Sounds good, although<sup>37</sup> I think **Sam** would agree<sup>38</sup> that we'd need to be extra vigilant<sup>39</sup> to ensure that partners are adhering to<sup>40</sup> data protection policy<sup>41</sup>. This still feels very experimental.

#### Sam

Yes, definitely<sup>42</sup>. We'll even perhaps need to re-draft<sup>43</sup> our partnership agreement docs.
